Claims 1 to 34 are pending in the instant application.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 to 9, 14 and 25 to 28, drawn to an isolated nucleic acid and method of use, classified in class 435, subclass 7.21.
- II. Claims 10 and 11, drawn to an isolated protein, classified in class 530, subclass 350.
- III. Claims 12 and 13, drawn to an antibody, classified in class 530, subclass 388.22.
- IV. Claims 15 to 18, drawn to a binding assay, classified in class 436, subclass 501.
- V. Claims 19 to 22 and 29 to 32, drawn to a compound of unspecified chemical or structural constitution, classification undeterminable.
- VI. Claims 23, 24, 33 and 34, drawn to a method of treatment by administering a compound of unspecified constitution, classification undeterminable.

The inventions are distinct, each from the other because of the following reasons:

The nucleic acid of invention I, the protein of invention II, the antibody of invention III and the compound of invention V are five chemically and structurally different compounds each of which can be made and used without the others. They are shown to be distinct because they lack a common utility that is based upon a shared feature or combination of features lacking from the prior art.

Inventions II and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the binding assay, as claimed, can be practiced with a cell that naturally produces a receptor protein of the instant invention, and the isolated protein, as claimed, can be employed as an immunogen in a process of preparing an antibody thereto.

Inventions V and VI are also related as product and process of use. They are shown to be distinct because the compound, as claimed, can be employed in a materially different process such as in the detection of a receptor thereto in a sample.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
